Top Individually Owned Windows Container Repositories

Weekly report: 2026-11-04 | Rolling activity window: 30 days

Ranked from the current GitHub search snapshot; native Windows containers are tier A, while Windows-host and WSL tooling are tier B. Problem summaries are capability-based inferences from repository descriptions; potential scenarios are suggestions, not verified roadmap commitments.

1. libracoder/kiri | Score: 74.75/100

https://github.com/libracoder/kiri

Problem solved: It provides a runtime for executing container workloads on Windows.

Potential scenario: A potential addition is cross-platform workload compatibility checks in continuous integration.

Tier: B | Stars: 111 | Forks: 8 | Last PR: 2026-11-04 | Last merge: 2026-11-04

Latest discussion: 2026-11-04 | Semantic classification: feature/enhancement (1.00)

Discussion excerpt: Security: CI checks with cargo-deny, ShellCheck, zizmor and OpenSSF Scorecard ## Summary Adds security checks that run on every pull request

Discussion source

2. DawnMagnet/wslc-compose-go | Score: 64.48/100

https://github.com/DawnMagnet/wslc-compose-go

Problem solved: It reduces manual coordination of multi-container applications.

Potential scenario: A potential addition is multi-service integration tests with startup-order and health checks.

Tier: B | Stars: 10 | Forks: 0 | Last PR: 2026-11-04 | Last merge: 2026-11-04

Latest discussion: 2026-11-04 | Semantic classification: technical contribution (1.00)

Discussion excerpt: v0.2.1: release notes, pin examples to v0.2.1 <!-- CURSOR_AGENT_PR_BODY_BEGIN --> Release notes for v0.2.1 (wslc 3.0.3 `wslc system session

Discussion source

3. mhackermsft/wslcontainerdesktop | Score: 63.57/100

https://github.com/mhackermsft/wslcontainerdesktop

Problem solved: It reduces command-line overhead for managing containers on Windows.

Potential scenario: A potential addition is bulk lifecycle operations and accessible multi-project management.

Tier: B | Stars: 253 | Forks: 7 | Last PR: 2026-10-26 | Last merge: 2026-10-22

Latest discussion: 2026-11-01 | Semantic classification: feature/enhancement (1.00)

Discussion excerpt: @mhackermsft hi iam new about wlscontainer dont know is this relate just want a feature to mount dir win folder to wlsc so can easly to shar

Discussion source

4. bacarndiaye/wslc-compose | Score: 63.00/100

https://github.com/bacarndiaye/wslc-compose

Problem solved: It reduces manual coordination of multi-container applications.

Potential scenario: A potential addition is multi-service integration tests with startup-order and health checks.

Tier: B | Stars: 32 | Forks: 6 | Last PR: 2026-11-03 | Last merge: 2026-11-03

Latest discussion: 2026-11-03 | Semantic classification: other (0.54)

Discussion source

6. seiggy/wslc-desktop | Score: 56.59/100

https://github.com/seiggy/wslc-desktop

Problem solved: It reduces command-line overhead for managing containers on Windows.

Potential scenario: A potential addition is bulk lifecycle operations and accessible multi-project management.

Tier: B | Stars: 3 | Forks: 0 | Last PR: 2026-11-03 | Last merge: 2026-11-03

Latest discussion: 2026-11-03 | Semantic classification: other (0.60)

Discussion excerpt: Show images, containers, volumes and networks from all WSLc sessions Lists images, containers, volumes and networks across all visible WSLc

Discussion source

7. adachi6k/wsltop | Score: 54.98/100

https://github.com/adachi6k/wsltop

Problem solved: It makes container resource usage and operational state easier to diagnose on Windows.

Potential scenario: A potential addition is resource-threshold alerts and historical performance comparisons.

Tier: B | Stars: 13 | Forks: 2 | Last PR: 2026-10-29 | Last merge: 2026-10-29

Latest discussion: 2026-10-29 | Semantic classification: technical contribution (1.00)

Discussion excerpt: chore: release v1.1.0 Release v1.1.0 with the optional `--hide-windows` filter and immediate TUI `w` toggle from #79, based on the contribut

Discussion source

8. joshmakestuff/hcsctl | Score: 49.38/100

https://github.com/joshmakestuff/hcsctl

Problem solved: It simplifies managing native Windows container isolation, images and networking.

Potential scenario: A potential addition is automated isolation and network compatibility tests across Windows releases.

Tier: A | Stars: 0 | Forks: 0 | Last PR: 2026-10-28 | Last merge: 2026-10-28

Latest discussion: 2026-10-28 | Semantic classification: technical contribution (1.00)

Discussion excerpt: Add managed guest sharing and VirtioFS mount recovery ## Summary - Deliver boot-scoped managed guest sharing and its journal/recovery founda

Discussion source

9. Medalink/watcher | Score: 47.13/100

https://github.com/Medalink/watcher

Problem solved: It makes container resource usage and operational state easier to diagnose on Windows.

Potential scenario: A potential addition is resource-threshold alerts and historical performance comparisons.

Tier: B | Stars: 0 | Forks: 0 | Last PR: 2026-10-29 | Last merge: 2026-10-29

Latest discussion: 2026-10-29 | Semantic classification: technical contribution (1.00)

Discussion excerpt: Follow Signal's rules in the dashboard: grey tiles, shared icons, current Signal, keyboard plots The dashboard now follows Signal's rules: t

Discussion source

10. Faulo/docker-choco | Score: 41.12/100

https://github.com/Faulo/docker-choco

Problem solved: It simplifies provisioning reproducible Windows container environments.

Potential scenario: A potential addition is validated dependency installation across supported Windows base-image versions.

Tier: A | Stars: 0 | Forks: 0 | Last PR: - | Last merge: -

Latest discussion: 2026-11-01 | Semantic classification: feature/enhancement (1.00)

Discussion source

Scoring and limitations

Weights: stars 15%, forks 10%, clones 10%, latest discussion 15%, latest PR 10%, latest merge 10%, human activity 15%, discussion semantics 15%. Stars, forks and activity are log-scaled; recency decays as exp(-days/15); tier B has a 0.85 multiplier. Unavailable clone data is omitted and its weight redistributed.

Known bot accounts are excluded, but a personal account does not prove human authorship. Activity is sampled from the latest 100 public events; counts can be incomplete. Discussion semantics use keyword heuristics, include issue/PR opening bodies, and may misclassify non-English text. User ownership does not establish employer independence.
